

District Court of Maryland

Maryland Judiciary - Montgomery County District and Circuit Courts

Despite challenges from the pandemic, Montgomery County Maryland collaborated with Tyler to seamlessly go live on the Maryland Electronic Courts (MDEC) case management system. Enterprise Justice, powered by Odyssey® allowed District and Circuit Courts to schedule hearings, generate forms, better track alternative dispute resolutions, and add case milestones based on each court's differentiated case management plan, leading to uninterrupted workflow efficiencies and a greater ability to provide information to citizens and court users. Montgomery County's innovative differentiated case tracks will be rolled out to other MDEC courts in the future, along with a first-of-its-kind criminal case initiation portal.

Choctaw Nation of Oklahoma

Members of the Office of the Tribal Prosecutor implemented additional features from Enterprise Justice to manage cases securely and remotely while the pandemic continues. Utilizing Enterprise Attorney Manager and Judge Edition, support staff and attorneys communicated with each other to create cases, generate documents, manage cases securely, and file with the district courts remotely. By reducing face-to-face contact, the court continues to serve the people of the Choctaw Nation of Oklahoma safely while increasing efficiency in tracking and following criminal and civil cases.

Choctaw Nation has a rich history, which is reflected in their motto: "Proud Past, Bright Future"

Superior Court of California, County of Sonoma

Automated new workflow, e-signatures, and other features helped create new pretrial business processes

The Superior Court of California needed an automated case workflow when it was awarded a grant for pretrial to keep up with the newly assigned cases to its docket for pre-arraignment pretrial. The Criminal Courtroom invested in an electronic signature solution, integrating it with Enterprise Justice. The integration expedited the process for clerks to make faster pre-arraignment release decisions and run an automatic report to file in each case. In addition, clerks can add events, cancel a hearing, schedule new hearings based on the data provided in the release order, and electronically file stamp a document to the case. The automation is now paperless and helped eliminate after-hours and weekend work for manual minute entry for the 2,600+ pretrial cases.

Glynn County State Court, Georgia

Glynn County State Court introduced innovation by integrating multiple solutions to enhance citation process efficiencies.

As Tyler's second-oldest Enterprise Justice client in Georgia, Glynn County State Court continued to innovate by integrating Electronic Citations powered by Brazos across its agencies with Tyler's case management system. Electronic Citations allow residents to pay for their citation in real time from anywhere. The information from the officer arrives more quickly and accurately to the court, reducing the processing time by roughly sixty percent. The Enterprise Justice and Electronic Citations integration increases efficiency and frees court staff to provide better customer service to the community.
