Absence & Substitute | **Enterprise ERP Integration**

Unique Benefits of Absence & Substitute and Enterprise ERP

Manual data entry adds unnecessary burden on your payroll department and increases the chance of clerical errors. Automation is crucial, especially when managing frequent unscheduled events such as employee absences which can be difficult to fit into an already busy day.
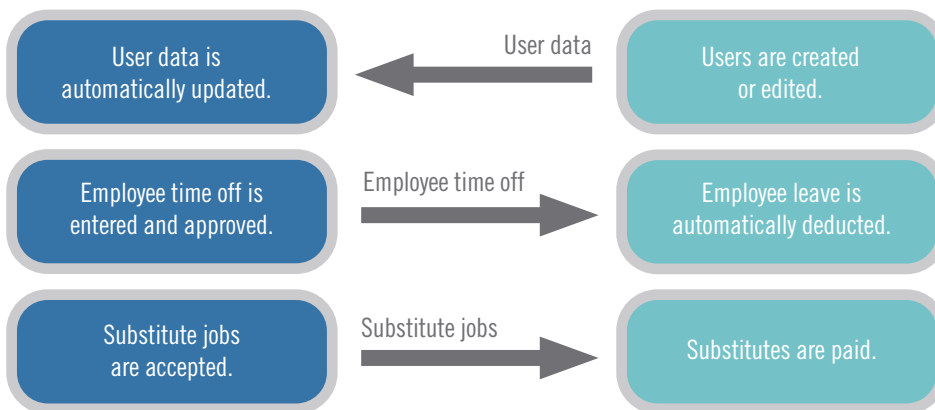

Absence & Substitute is an industry-leading substitute scheduling and absence management solution, built for the K-12 environment. Absence & Substitute allows employees to enter absence requests, administrators to review and approve them, and substitutes to view and accept jobs. Direct integration of this data with your Enterprise ERP software automatically syncs user data for employees, substitutes, and administrators. It also saves a significant amount of time during each pay cycle that would otherwise be spent on manual data entry. Reduce clerical errors and increase your district's confidence in employee information, leave hours, and substitute pay with Absence & Substitute and Enterprise ERP.

Absence & Substitute Functions:

- Employee leave management

- Substitute job and credential management

- Employee and substitute notifications

- Cloud-based, modern technology, and a free mobile app

- Integration with payroll, timekeeping, and applicant systems

Absence & Substitute

Enterprise ERP

Absence & Substitute		Enterprise ERP
