

MANAGED DETECTION & RESPONSE

Enterprise Cybersecurity Portal

INTERACTIVE DASHBOARD

Easily access threat updates with a customizable dashboard.

ENTERPRISE-LEVEL INTELLIGENCE

Benefit from intelligence on threats targeting your locality or entities.

REAL-TIME REPORTING

Backed by a 24/7 security ops center leveraging cybersecurity analysts, AI, and machine learning.

GAIN INSIGHT INTO LOCAL GOVERNMENT CYBERTHREATS AND ATTACKS

With escalating frequency and precision, cyberattacks are impacting local governments — the most susceptible and attacked targets. Tyler Technologies’ Managed Detection & Response solution offers the Enterprise Cybersecurity Portal, which features real-time threat intelligence and notification of cyberattacks happening across multiple sites monitored by Managed Detection & Response.

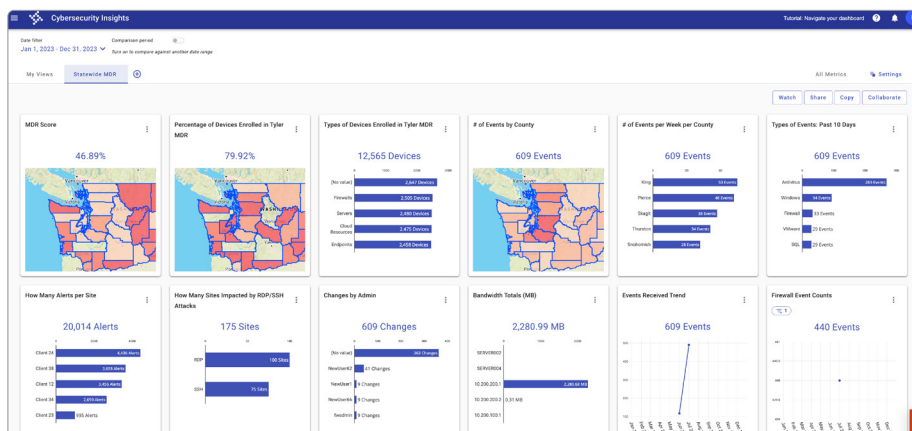

AN INTERACTIVE DASHBOARD TO GUIDE DECISION-MAKING

Empowering executives with global visibility into active, local government cyberthreats, Enterprise Cybersecurity Portal is a customizable resource that allows for dynamic threat and attack analysis. It is powered by Tyler’s Managed Detection & Response solution and supported 24/7 by cybersecurity analysts, AI, and active machine learning.

Security incidents are aggregated in real time to monitor across multiple local government networks. The Enterprise Cybersecurity Portal collects threat intelligence across multiple Managed Detection & Response sites, presenting these aggregated findings in an interactive dashboard to alert and guide informed decision-making in an ever-evolving threat landscape.

ENTERPRISE CYBERSECURITY PORTAL:

- Provides Managed Detection & Response scoring, highlighting risk and compliance, and identifying vulnerabilities down to the individual community level
- Identifies common attack vectors impacting localities or entities
- Defines types of devices on networks across the enterprise
- Identifies and correlates common attack vectors including:
 - » Active malware
 - » Brute force attacks
 - » Compromised credentials
 - » Privilege escalation
 - » Malicious traffic
 - » Misconfigured firewalls

The Enterprise Cybersecurity Portal provides quick access to threat analysis.
