SECURE, RELIABLE SAAS SOLUTIONS FOR COURTS AND JUSTICE AGENCIES

Natural disasters. Cybersecurity threats. Remote and work-from-home scalability. Rising costs. There are numerous circumstances that can dramatically — and in some cases instantly — impact business operations. To help reduce the risks of business interruption and mitigate budget impact, many look to Software-as-a-Service (SaaS) solutions that offer more advantages and flexibility. A SaaS subscription-based solution can help you avoid the burden of on-premise hosting and any associated maintenance, security, and costs.

Whether you already leverage Tyler solutions as part of your justice process, or you're looking for a technology partner to enhance your agency with a full SaaS system, our cloud-based solutions deliver the security and scalability to meet your needs both today and in the future.

WHY TYLER TECHNOLOGIES?

We are the largest provider of cloud technologies in the public sector, with more than 8,600 clients using our cloud-based solutions. We support a variety of cloud-based technologies including hosting, cloud data storage, digital content access, multi-agency data sharing, and online public portals.

INCREASE AVAILABILITY AND UPTIME

Our SaaS environment maintains high uptime to keep you working

ENHANCE SECURITY AND COMPLIANCE

Keep data safe with government-compliant, industry-grade security protocols

ELIMINATE HARDWARE

Host your data in the cloud and eliminate your hardware expense

BENEFITS OF SAAS WITH TYLER

Redundant infrastructure with high availability

You can rely on our SaaS environments — which run in multiple independent datacenters, each with redundant power, network, and connectivity — to keep you working without the worry of lengthy system outages. Plus, whenever a new version of your cloud solution is available, it will automatically be available without the need for your I.T. team to take time to install anything. That is available at no extra cost to you, part of our evergreen philosophy to continually provide you with the most up-to-date solutions.

Included business continuity

With a Tyler-hosted solution, you can rest assured that your data is safely stored in the cloud. So when a devastating event occurs, you'll prevent any impact to your data or system and ensure business continuity.

Safeguard information from cybersecurity threats

Our SaaS solutions are built for governmental compliance to ensure the safety of your information, to meet any reporting requirements you may have, and to help protect against cyber threats.

Work from virtually anywhere

Enhance your ability to accommodate remote work and work-from-home situations through our SaaS environments. Secure connections through your SaaS solution are managed by Tyler, so even if your local network is down, you and your colleagues can still safely connect to your Tyler-hosted solution.

No hardware infrastructure, network, or server licensing needed

Eliminate the time and expense that comes with buying, implementing, and maintaining your own on-premise system by hosting your data in our SaaS environments, which always operate in a state-of-the-art I.T. infrastructure. With the reduction in hardware, you will also save physical space which can be repurposed or potentially reduce costs. With Tyler assuming the cost to maintain those systems, that allows you to focus on more pressing IT projects within your community.

Accurately forecast expenses with fixed costs

Fixed-cost contracts for our cloud solutions enable you to forecast your budget without the additional, unexpected expenses that might pop up when implementing and supporting hardware infrastructure for an on-premise system. This includes the maintenance and replacement of servers and hardware refresh cycles. Tyler will provide up-to-date hardware at no additional cost.
