

Virtual Court

Developed through collaboration with courts of varying size from across the country, Virtual Court provides a turnkey platform for conducting face-to-face court sessions online. Defendants can attend a hearing from anywhere. Rather than physically going to the courthouse, they will log in using any internet-connected device with a camera to go through the court proceedings with the judge using a secure video chat feature. Parents and legal guardians of juveniles, along with defense attorneys, can also be present and engage as full participants during virtual court sessions.

Additionally, courts can set up separate “rooms” within a virtual court session to route defendants to additional virtual areas for case-related discussions and actions outside of the standard hearing proceeding.

Each proceeding is supported by real-time case information and document sharing through a seamless integration with the Tyler case management system.

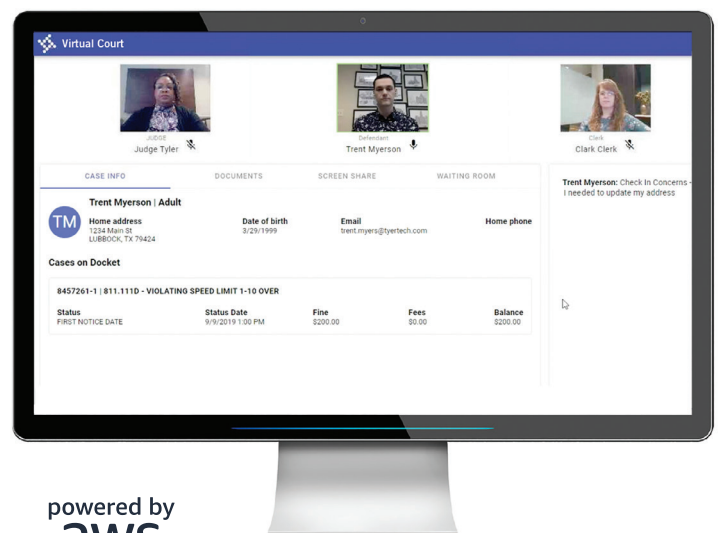

Virtual Court is a cloud-based solution — hosted and maintained by Tyler.

There is no software to install — all you need is a browser.

Use any device — desktop, tablet, or phone.

Most defendants want to resolve court business but are sometimes prevented from doing so because of circumstances ranging from a lack of childcare to the inability to miss work to the simple fact that they do not live in the same city as the court.

Virtual Court helps you empower those defendants with a flexible option to take care of their case in a timely manner.
